

Why does quote prices sometimes differ between Webline and providers?

Last Modified on 08/05/2024 9:39 am BST

When you first register with Webline, any quotations you request will, by default, be requested from the insurers with 100% commission (i.e. no commission sacrificed).

It is possible to set the value of commission you would like from each product provider in turn for each product. To list your current commission settings, you should:

- Logon to Webline
- Click on the top navigation button "settings"
- From the "commission settings" option select the required product type
- The current commission settings for each provider for this product type will be displayed. Select the provider you wish to edit and then change the commission values to what you require.

NOTE: Some product providers do not support commission sacrifice and some only allow a limited number of choices, in these cases, only valid choices will be available.
